

# ENERGIZE & AROUSE

## Male Silk Moth

The Male Silk Moth has been known by the Chinese as a way to increase the libido in men and women for thousands of years. The main ingredient, Bombyx Mori L., is at the top of the ingredients list for the new male enhancement product we sell known as Energize & Arouse. As a replacement for Revive, since it is no longer available, Energize and Arouse has been well received by a large number of our male shoppers. It has been over a year's wait for this new product to come to the market but well worth the wait.

### Male Silk Moth Benefits

- Holistic Energizer\*
- Nitric Oxide\*
- Adrenal Regulator\*
- Sexual Potency\*
- Hormones\*
- Longevity\*

Supplement Facts		
Serving Size: 1 Capsule		
Serving Per Container: 20		
Each Capsule Contains	Amount Per Serving	% Daily Value
Proprietary Blend

Wild Yam Extract		
Siberia Ginseng Extract		
White Willow Extract		
Jujube Extract		
Cayenne Extract		
Stinging Nettles Extract		

\* Daily Value (NDV) not established

# ENERGIZE & AROUSE

## Male Silk Moth Summary

This species, *Bombyx Mori L.*, feeds upon the leaves of the mulberry tree. Domestication of the silkworm began 5,000 years ago and was a long kept secret of the Chinese. For thousands of years it was traded in the old world along The Silk Road.

In Asia and the Pacific, silkworms, like many insect species, and their pupae are considered food and will be found in fine cuisine and are considered to be an excellent source of protein. But it is the connoisseurs who delight in the male silk moth, who born from their cocoons have the capacity to copulate with hundreds of female silk moths before tiring.

## Silk Factory - Silk is made from the Cocoons of Silk Larvae

Within minutes of emerging from their silky cocoons the male silk moth must be separated and collected before it copulates with the females. This process is used to ensure that all the important constituents and hormones are present until hydro alcoholic extraction.

## Male Silk Moth Uses

1. Traditionally the male silk moth is a potent antioxidant used to increase libido, psychological desire for sex and to make sexual intercourse more satisfying for both men and women.
2. The Chinese specifically use male silk moth as an anti-aging tonic to restore youthfulness.
3. It contains several important nerve and gland constituents that nourish and stimulate our bodily systems for healthy growth by regenerating our own endocrine systems.
4. It supports the reproductive organs and associated hormones, stimulates sperm production and the growth of bone marrow.
5. As a nerve stimulant that will increase muscular power and sexual potency.

## ENERGIZE & AROUSE

6. Being a very potent kidney adrenal tonic it will help to regulate water metabolism while supporting kidney functioning.
7. Waist and body bloat may decrease with long term consumption.
8. The addition of Cornus Berry will help the kidneys by counteracting flaccid tissues.

### How Does Male Silk Moth Work?

A large part of how the Male Silk Moth works is via the complicated actions of nitric oxide and its effects of vasodilation and relaxation of muscle tissue. It does so by stimulating neurotransmitters such as nitrites and by modifying or releasing nitric oxide from cells.

The benefits are numerous:

- Better blood flow
- Cardiovascular health
- Increased power of your five senses
- Improved cognitive functions

Although this greatly enhances pumping with weights and increasing blood volume of muscles, it also assists with penile erections. With better blood flow to and from the muscles, one will have less lactic acid build up, and greater overall stamina and reduced soreness.

### **Bombyx Mori L. with a Wingspan of 3-5 cm**

Preliminary studies on animals show increases in hormones that are most likely attributed to the large amount of natural hormones found within the male moth, as well as, the plentiful nutrition that activates SOD (super-oxide dismutase).

Serrapeptase (an enzyme) is most likely one of the mechanisms for boosting blood circulation throughout the body and shows powerful antioxidant properties. Due to the high amount of cephalin, the male silk moth may not only stimulate the nervous system, but regenerate it also. Cephalin is found in high amounts within the cell membranes of neural spinal

tissue and in the white matter of brain tissue. The regeneration of these precious organs can assist nervous power and cognitive function. Additional benefits include skin health and the tightening of these tissues due to the high unsaturated fatty acid.

Other anti-aging benefits offered by tonic adaptogens, and their general functions in stress resistance, may be found in the Male Silk Moth.

### **It Takes 3,000 Cocoons to Make One Pound of Silk**

**Active Constituents:** Proteins (All 18 Amino Acids), Hormones (Ecdysone, Androgens), Enzymes (Serrapeptase), Prostaglandins, Phospholipids (Phosphatidylethanolamine [Cephalin], Unsaturated Fatty Acids [alpha-linolenic acid]), Vitamins (E), Minerals (Zinc, Chromium, Calcium), Trace Minerals.
